KE-1701-RK User Code Record List

The Worry-Free Keyless Entry® System

KE-1701-RK User Code Record List			
Code Type	User Name	3 – 8 Digit Long Code	Date Changed
Master User Code			
Optional User Code 111			
Optional User Code 113			
Optional User Code 115			
Optional User Code 117			
Optional User Code 119			

What code combinations are restricted

- Codes 559, 557, and 555 are pre-assigned as Lock Codes. There is no harm if everybody knows the Lock Code. However, you can't change a Lock Code so you can't use 559, 557, or 555 as the Master User Code or as an Optional User Code.
- You may not program a new Master User Code or Optional User Code that starts with the digits 5 or 6 (Key 5/6). Why? Because Lock Codes start with 5. If you want a 5 or 6 at the beginning of your code start with 05 or 06 plus the additional digits of the complete code. Example: 05 05 68 (a birth date).

! Caution ! Never use the same first 3 digits of your Master User Code as the first 3 digits of an Optional User Code. If you do,you will not be able to program any more. You will have to press the System Programming Switch and select a new Master User Code.

What code combinations are not recommended

- Using your ATM PIN number or computer pass codes
- Short codes using the same digit - example: 111, or very simple codes - example: 123 or 911
- The numbers on your car license plate

KE-1701-RK REV A - 8-25-10
