AN1101: SKS906 SPRINTER DRONE/REMOTE CONNECTION

To connect current Compustar brand remote controls or DRONE DR-5400 or newer telematics modules to the SKS906C requires the use of a CM7200 module. A data cable in crossover configuration (TX/RX wires reversed on one end) is required. Additionally, the low voltage ignition input wire on the CM7200 must be connected to Ignition status out on the SKS906C as shown in the diagram. A diode must be inserted along the ignition wire.
