

INFERNO

IF SOMEONE WAS ROBBING YOUR BUSINESS OR HOME RIGHT NOW, WOULD YOUR CONVENTIONAL ALARM BE ABLE TO STOP THEM?

It only takes

minutes to steal...

ONE INFERNO UNIT CAN PROTECT UP TO 750 SQ FT

Inferno is a revolutionary technology capable of safely **denying access to critical areas**. The award-winning Inferno Security Barriers are used around the world, from embassies and nuclear storage facilities to shops and distribution centres.

Inferno will cause any intruder additional discomfort. Upon activation an **intolerable - but harmless - wall of sound activates, driving the intruder out of the premises**. The powerful Sound Barrier projects 125db of ear-piercing sound besides other special frequencies causing a person to immediately modify their behavior, typically using both hands to cover their ears and leaving the area immediately. It is also very effective because it completely breaks down communications.

Failure to vacate the protected zone provokes differing reactions from nausea, inability to concentrate and communicate, disorientation to vertigo. The dynamic nature of the spectrum has a beneficial side effect: it is extremely difficult to locate the source of the sound, ensuring that the intruder cannot readily eliminate the cause of distress.

Unlike a standard alarm system with sirens that can be and are ignored, the Inferno sound barrier is impossible to ignore. A standard security siren is just a passive device that alerts the intruder that he has been detected; while unpleasant, it's certainly tolerable (at least for the few minutes needed to grab valuable assets). Contrast the Inferno sound barrier, which also alerts the intruder but most importantly, **actively forces him to leave the protected area immediately**.

Inferno Mobile System is a unique and powerful stand-alone alarm system that is ready to use with almost no installation required. It includes Inferno Intenso, an infrared motion detector and fobs.

Inferno Mobile System has built-in sabotage protection and a battery. The outer casing is made of aluminium and steel which makes it sturdy and durable.

How does the sound differ to conventional intruder alarms?

Inferno uses a patented frequency pattern that generates the most unbearable of sounds. The frequency creates an **insufferable, piercing noise**. This separates Inferno from conventional alarms that merely emit a consistent sound to which the human ear can adapt, and learn to tolerate.

Imagine this scenario: an intruder has forced his way into your premises. What do you want to happen next? If you answered: "I want him to leave immediately!" or something less polite, we ask you this: **"What does your current security alarm system do to ensure that this happens?"**

**YOU CAN'T STEAL
WHAT YOU CAN'T SEE!**

IF SOMEONE WAS ROBBING YOUR BUSINESS OR HOME RIGHT NOW, WOULD YOUR CONVENTIONAL ALARM BE ABLE TO STOP THEM?

Fogging systems are **legal and safe** security devices that, on detection of a burglar in your business or home, generate a thick, impenetrable and **harmless** smoke obscuring the vision of the intruders or attackers, making it essentially impossible for them to continue with their attack and **driving them from your premises**. Our systems **don't leave a residue** behind, and are harmless to people, animals and goods (including electronics) which means you can get back to business right away.

UR Fog is special because it provides the required **immediate response** that a security guard offers, but without a salary.

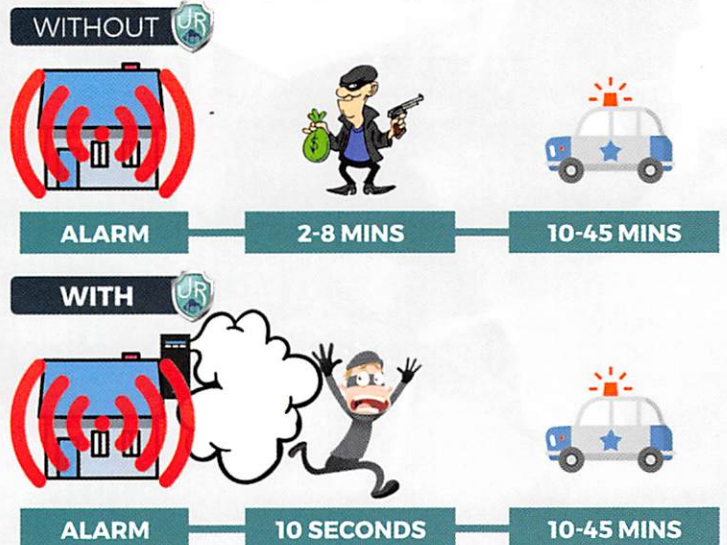

Standard alarms cannot prevent thieves from entering your shop, warehouse or property. Even if the warning signals are activated, thieves know that the **police need at least 10-15 minutes to arrive** where required, while **thieves only need a few minutes to enter, steal and escape**. That's why just alarm systems are not enough anymore, and the installation of fog generators with your alarm system is becoming a need.

With UR Fog, most burglars leave in the first 10 seconds, and those that do try to stay usually leave in another 20 seconds when they realize stealing is just too hard, and the more they try, the more they risk being arrested.

UR Fog fills the room with **dense smoke within seconds building up a wall and physically acts against the intruder preventing the thief from finding the valuables and entering the protected area** within the very first seconds. We call this **immediate protection** of your valuables. The burglar cannot see what he has come for.

A fogging system is the only system able to provide an active and effective protection in case of attempted robbery, because it completely obstructs visibility from the first seconds after a robbery takes place. **Robberies and burglaries** are usually completed in **less than 3 minutes**, and the police usually takes **at least 10 minutes to arrive**, that is enough for a theft.

CCTV recording have no deterrent effect, as the intruders wear masks. CCTV systems are a great means to document crimes and file insurance claims; UR Fog is a system that **stops crime as soon as it starts**. With standard alarms and video surveillance systems you can be warned of an attempt of intrusion but you cannot avoid it and usually for a thief it takes from 2 to 5 minutes to complete a theft. UR fog generators are so quick in fog ejection that in few seconds you cannot see anything and there is no way to see through fog. **UR Fog is the only way to protect your goods immediately.**

**ONE URFOG UNIT CAN
PROTECT UP TO 7,900 SQ FT**
